Hi Om,

A lot of you wrote in after the last email. We picked the questions that came up more than once. Here they are.

FAQs**Do we have to build a prototype or test against the APIs?**

No. Nothing gets built this round and you don't connect to any of their servers. You do need to know what each endpoint gives back, so your flow can show what your agent asks for and what comes back.

Do we need API access from Pine Labs and Delhivery?

No. This round runs on their documentation. You are not connecting to anything and nothing has to run. Gnani is the one exception. Sign up on their platform and use the sandbox, because the documentation alone will not show you what the voice models can and cannot do.

We cannot sign in to Gnani with our college email.

Use a personal address. Your credits work the same either way.

We are not clear on how to use the API documentation. What are we looking for?

Two things. First, what each rail already has and which of those your agent calls. Then what is missing. Name specific endpoints. A response written as "our agent uses the voice rail to talk to users" is incomplete. A response that names the endpoint it calls and what comes back demonstrates a fully assembled agent.

What counts as a capability that does not exist?

Anything that does not exist in the form you need it. A rail doing something roughly similar for another purpose does not close your gap. Say what you need, in the shape you need it, and which part of your flow stops without it. And don't scale your agent down to fit what already exists.

What is the unhappy flow in question 3?

Every way your agent fails at what it is supposed to do, and what it does about each one. Map them out.

For the L1–L4 question, should we mention the level we want our final agent to achieve, even if some features needed for that level would have to be built?

Yes. Score the agent you are designing, including the capabilities that would have to be built.

Do we present to Gnani, Pine Labs or Delhivery this round?

No. Round 2 is written, and we read it.

Can we still switch tracks?

No. Round 1 was the last chance. For round 2, every team answers the same eight questions whichever track they picked. The tracks separate in the next one.

How many rounds are left?

Round 2 is not the last one. After this comes the Build round, then the finale.

Where do we ask questions?

Write to adhavan@the-ken.com.

Submission closes Friday, 25th September, 11:59 PM IST. The submission portal will open by Wednesday, 23rd September, 12:00 PM IST.

All the best,

Adhavan RK
